PROFESSIONAL SUMMARY

Full-Stack Web Developer and DevSecOps Engineer with experience building secure, scalable web applications and managing Linux-based cloud infrastructure. Skilled in end-to-end software delivery, CI/CD automation, AWS, system administration, and security-focused operational practices. Brings a practical problem-solving approach to delivering reliable, maintainable solutions in collaborative, fast-moving environments.

WORK EXPERIENCE

Wend Philippines Inc.

Lead Full-Stack Web Developer / Technical Lead

October 2023 - Present

- Developed and maintained Patient Information and Insurance Provider Management Systems using PHP Flight, Laravel, Bootstrap, jQuery, Tailwind CSS, and Svelte, delivering responsive, user-friendly, and legacy-compatible platforms.
- Collaborated with non-technical field nurse practitioners to gather requirements, understand workflow pain points, and translate operational needs into system improvements.
- Delivered technical demonstrations to stakeholders and nurse practitioners, showcasing system functionality and supporting user adoption.
- Configured and deployed scalable AWS infrastructure using EC2, Docker, S3, SES, RDS, Lambda, Textract, ECS, and Route 53.
- Managed an enterprise-grade email server using Mailcow and administered virtualized servers and software-defined networking (SDN) environments using Proxmox as the hypervisor.
- Configured and maintained a high-availability hypervisor cluster, including backup management, disaster recovery, and data integrity operations, to ensure resilient and reliable infrastructure.
- Performed ongoing maintenance, troubleshooting, and feature enhancements to support application performance, security, reliability, and stability.

RAKwireless Technology Ltd.

Information Technology Manager

November 2019 - October 2023

- Lead a cross-functional team of web developers and backend operations specialists, aligning delivery with internal stakeholders, management priorities, and company technology objectives.
- Develop and execute IT initiatives, fostering collaboration across teams and improving operational efficiency.
- Conduct AWS cloud deployment cost analyses and recommend cost-optimization measures, including Savings Plans and resource-utilization improvements.
- Support the company's ISO 27001 compliance efforts by helping implement and maintain security controls, documentation, and technology practices aligned with information security requirements.
- Serve as a hands-on Senior Technical Consultant, providing architecture guidance, troubleshooting complex issues, mentoring developers, and contributing directly to code when needed.
- Configured and managed a high-availability server cluster using Ansible, automating service updates and deployment processes across the infrastructure.

Full-Stack Web Developer / DevOps Lead / Team Leader

March 2019 - November 2019

- Lead a team of web developers while contributing directly to coding, solution design, and technical planning for the company's corporate website, Shopify store, documentation hub, support forums, and system integrations.
- Design and implement Shopify Plus automations, custom workflows, and third-party app/plugin integrations to improve e-commerce operations.
- Developed custom Shopify checkout fields and integrations that connect order data to the internal Odoo ERP platform.
- Ensure all digital platforms meet standards for quality, performance, reliability, and alignment with business objectives.

Web Developer / Freelance

November 2018 - March 2019

- Rebuilt the company's primary website from the ground up using Laravel, Tailwind CSS, and modern web development practices, with a focus on performance, SEO, and product-support functionality.
- Designed and implemented an automated CI/CD deployment pipeline using GitOps principles, enabling changes to be deployed automatically upon code push.
- Built a custom asset-management pipeline that optimizes, compresses, and serves responsive image sizes based on device screen resolution.

MNTD Pte. Ltd.

Information Technology Specialist / Automation Engineer

August 2021 - October 2023

- Built and maintained backend APIs and Shopify Plus Flow automations, creating event-driven workflows that streamline e-commerce operations when defined store events occur.
- Managed high-demand product launches for Shopify stores, coordinating with Shopify Plus Support to prepare for high-volume traffic and maintain reliable ordering experiences.
- Implemented queue-based pre-order workflows that issue dedicated purchase links according to each customer's position in the queue, supporting fairer access to limited product releases.
- Developed automated fraud-control workflows that cancel high-risk orders based on credit-card risk assessments provided by Checkout.com.

Seaplane Group

DevOps Engineer / Technical Lead

June 2022 - January 2023

- Developed and maintained automated cloud deployment solutions focused on reliability, security, operational efficiency, cost optimization, and disaster recovery.
- Implemented cost-saving measures through resource optimization and infrastructure planning, while ensuring backup and recovery processes were in place for critical systems.
- Designed CI/CD workflows to support continuous delivery and automated deployment of web applications.
- Built infrastructure automation using Kubernetes to support multi-node, highly available environments with failover and internal load-balancing capabilities.
- Partnered with development teams to design and maintain automation that accelerates development and deployment workflows.

St. Paul University Dumaguete

Information Technology Lecturer / Part-Time

October 2022 - December 2023

- College IT Lecturer for third- and fourth-year bachelor students, specializing in web development, database management, and networking.
- Deliver practical, industry-focused instruction that strengthens students' technical knowledge, problem-solving skills, and readiness for IT careers.

Information Technology Consultant / Part-Time

September 2020 - December 2020

- IT Consultant supporting the university's server infrastructure and web services in exchange for a partial scholarship grant.
- Provisioned new servers and configured web services, applying DevOps and system administration knowledge to support reliable campus operations.

Ingenuiti LLC

Full-Stack Web Developer

June 2021 - August 2022

- Developed an internal business operations tool using Laravel, MySQL, and jQuery to streamline core workflows and improve operational efficiency.
- Delivered reliable, user-focused functionality that supported key organizational objectives.

LiveHelp4Us Computer Services

Technical Specialist / Internship

August 2018 - December 2018

- Provided technical troubleshooting and client support for a leased Point of Sale (POS) system.
- Assisted with on-site POS deployment, installation, configuration, data migration, and ongoing merchant support.
- Contributed to maintenance efforts for the POS platform.
